- Git
- OAuth2
- Node JS
- NestJS
- Python
- C
- Docker
- Redis
- Next.js
- RabbitMQ
- Prisma
- Sequelize
- Remix
- Chakra UI
- Bootstrap

PROFILE

I am a fullstack developer who can do both back-end (server-side) and front-end (client-side) programming. I have a big interest in becoming a specialist in back-end development. I have done numerous projects involving front-end and back-end development.

EXPERIENCE

Personal Website
Fullstack Developer

A personal website for users to make many journals about their projects which are displayed on the website. The journals can be changed and deleted by the user who created them. I worked individually on this project for 1 month.

Circle
Fullstack Developer

A social media website called Circle where users can interact with other users through contents created by any user. Users can create their contents by posting words and images in the website. I worked individually on this project for 1 month.

Lakoe
Fullstack Developer

A team project, namely a website called Lakoe which is an ecommerce website that allows sellers to sell their products to buyers. In this project, I am responsible for managing message template in configuration to be sent to buyers by sellers. I worked in group on this project for 1 month.

Smart Park
Backend Developer

A team project, namely a website called Smart Park that allows users to reserve parking areas in a mall. In this project, I am responsible for managing users for booking parking area in a mall and checkout process when users leaving the mall. I worked in group on this project for 2 days.
